

Urban gardens have many social and ecological potentials. There, we experience natural cycles, ecological correlations, and environmental and climate protection. We are in exchange with others and experience political and social connections.

In urban gardens we can prosper together and continue to learn through community activities. The key advantage of them is INCLUSIVENESS - public and easily accessible urban gardens provide an opportunity for participation, especially for disadvantaged groups.

GARDENS as Inclusive Green Learning Spaces is an Erasmus+ project that delivers an experience about green education and inclusion across organizations in Europe. We collect and share methods and practices to learn and discover how environmental education in gardens can be more accessible. The methods are on the topics of sustainability, circular economy, participatory methods, ecology, climate and food production with an inclusive approach. The results will be publicly accessible and usable. The best practices will be published in an eBook and interactive online map. A summary of the eBook will be available in all project languages.

## About Us

We are members of European partner organizations from France, Germany, Italy, Poland and Sweden - a collective of organizations and institutions focused on non-formal education in the context of garden-based solutions. Our work is focused on topics about sustainability, local or circular economy, green education, ecology, and food production. We strive for the inclusion of people with disabilities and the integration of socially excluded groups.

Our team includes educators, community practitioners, business consultants, trainers, gardeners, representatives of local authorities/offices and landscape designers.
